*New York Times*

Should we keep an eye on these partisans?

→ Do **partisan appointees** put more effort into implementing **divisive measures**?

# Preview

Do **partisan appointees** put more effort into implementing **divisive measures**?

→ **Not necessarily**: they don't need to signal alignment.

# Preview

Do **partisan appointees** put more effort into implementing **divisive measures**?

→ **Not necessarily**: they don't need to signal alignment.

We analyse:

- high-level decentralized **bureaucrats** (*prefects*)
- in Fascist Italy (1922-1940),
- who controlled the political police, tasked with surveilling potential dissidents.
- Prefects had visible political **credentials**:
  - some joined the Fascist Party early (*partisans*)
  - some did not (*non-partisans*)

# Preview

# Two plausible narratives

# Two plausible narratives

## Pure Effort

**Partisans** are more aligned

→ they always put more effort.

- evidence from democracies:
  - Spenkuch, Teso, and Xu (2023) and Wirsching (2025) in the US,
  - Rivera (2020) in India;
- and from autocracies (Svolik 2012):
  - Scharpf and Gläbel (2020) in Argentina,
  - Aaskoven and Nyrup (2021) in Nazi Germany.

# Two plausible narratives

## Pure Effort

**Partisans** are more aligned  
→ they always put more effort.

- evidence from democracies:
  - Spenkuch, Teso, and Xu (2023) and Wirsching (2025) in the US,
  - Rivera (2020) in India;
- and from autocracies (Svolik 2012):
  - Scharpf and Gläbel (2020) in Argentina,
  - Aaskoven and Nyrup (2021) in Nazi Germany.

## Signalling

**Partisans** do not need to prove themselves  
→ they may put less effort.

- Autocrat screens agents on performance (Montagnes and Wolton 2019)
- and agents that want to signal effectiveness overrepress (Luo and Zakharov 2025).
- Compatible evidence:
  - from China (Qian and Bai 2024 in the Anti-Rightist Campaign)
  - and Kenya (Vanden Eynde, Kuhn, and Moradi 2018 on co-ethnic shirking).

Case

# History: Our agents

## Prefects

- Appointed by the Ministry of Interior,
- highest representative of executive power in the province,
- with vast policing powers:
  - liaised with the secret police (OVRA),
  - decided on *confino* (see Fontana et al., WP),
  - oversaw the political police.

### PROVINCIA DI AOSTA

La provincia fu istituita con r.d.l. 2 gennaio 1927, n. 1, con parte del territorio della provincia di Torino. Con d.l.lg. 7 settembre 1945, n. 545, la provincia fu soppressa e il territorio della Valle d'Aosta fu costituito in circoscrizione autonoma con capoluogo Aosta - a decorrere dalla data della restituzione della provincia all'amministrazione italiana - retta da un consiglio elettivo al cui presidente furono assegnate la rappresentanza della Valle e le attribuzioni conferite dalla legge al prefetto ed al presidente della deputazione provinciale.

PIRRETTI Stefano, dott., vice prefetto, 16 dicembre 1926 - 16 luglio 1929 nominato prefetto di Sondrio  
SALVETTI Giacomo, dott., prefetto di Arezzo, 16 luglio 1929 - 10 agosto 1930 collocato a riposo per ragioni di servizio  
PIETRAUSSA Pietro Paolo, dott., vice prefetto, 10 agosto 1930 - 25 ottobre 1931 nominato prefetto di Trento  
NEGRİ Umberto, dott., vice prefetto, 25 ottobre 1931 - 25 luglio 1935 collocato a disposizione  
D'EUFEMIA Angelo, ing., prefetto di Savona, 25 luglio 1935 - 21 agosto 1939 collocato a disposizione  
CHIARIOTTI Pietro, dott., vice prefetto, 21 agosto 1939 - 1° giugno 1941 collocato a disposizione  
SIGNORELLI Luigi, dott., prefetto a disposizione, 6 giugno 1941 - 15 settembre 1943 nominato prefetto di Sondrio  
GABETTI Ottavio, dott., prefetto a disposizione, 15 settembre 1943 - 25 ottobre 1943 collocato a disposizione (RSI)

# Digitizations

## Explanatory variables:

- OCR'd *prefect biographies* from Cifelli (1999),  
→ 414 prefects.
- OCR'd *appointments* from Missori (1989),  
→ 90 provinces, 18 years.

## Outcome variable:

- *Individual-level political police records* from the Political Police Archive (see Panza et al. 2025, Dipoppa & Pezone 2025)  
→ almost 100-thousand potential dissidents surveilled.

Raw trends

Empirics

# Empirical Strategy

*Treatment:* a partisan prefect is assigned to the province (duration-weighted: 0 to 1 year share)

*Outcome:* number of political surveillance records opened per province-year.

# Empirical Strategy

*Treatment:* a partisan prefect is assigned to the province (duration-weighted: 0 to 1 year share)

*Outcome:* number of political surveillance records opened per province-year.

**Staggered DiD** à la de Chaisemartin and D'Haultfœuille (2024), on not-yet-treated.

Accounts for:

- continuous treatment,
- staggered treatment adoption,
- and treatment exit.

Parallel trends violated if partisans are assigned to locations where opposition is anticipated to weaken.

Alternative explanations

# Staggered DiD - Results

(a) Any Partisan.

(b) Early Partisans.

Figure 6: Effect of Receiving a Partisan Prefect on Surveillance Level ( $\downarrow \sim 20\%$ )

Mechanism

# Mechanisms

We find no evidence in support of:

- **Mere turnover:**

Only significant when the incoming prefect is a loyalist.

Turnover

# Mechanisms

We find no evidence in support of:

- **Mere turnover:**

Only significant when the incoming prefect is a loyalist.

Turnover

- **Competence:**

Controls don't affect the effect size.

Competence

# Mechanisms

We find no evidence in support of:

- **Mere turnover:**

Only significant when the incoming prefect is a loyalist.

Turnover

- **Competence:**

Controls don't affect the effect size.

Competence

- **Preferential deployment:**

Loyalists are not sent to more desirable locations.

Deployment

# Mechanisms

We find no evidence in support of:

- **Mere turnover:**

Only significant when the incoming prefect is a loyalist.

Turnover

- **Competence:**

Controls don't affect the effect size.

Competence

- **Preferential deployment:**

Loyalists are not sent to more desirable locations.

Deployment

- **Embeddedness:**

Being local does not explain the effect.

Embeddedness

# Mechanisms

We find no evidence in support of:

- **Mere turnover:**

Only significant when the incoming prefect is a loyalist.

Turnover

- **Competence:**

Controls don't affect the effect size.

Competence

- **Preferential deployment:**

Loyalists are not sent to more desirable locations.

Deployment

- **Embeddedness:**

Being local does not explain the effect.

Embeddedness

We find some evidence consistent with:

- **Deterrence:**

Initial surveillance is higher, but not within prefects.

Deterrence

# Mechanisms

We find no evidence in support of:

- **Mere turnover:**

Only significant when the incoming prefect is a loyalist.

Turnover

- **Competence:**

Controls don't affect the effect size.

Competence

- **Preferential deployment:**

Loyalists are not sent to more desirable locations.

Deployment

- **Embeddedness:**

Being local does not explain the effect.

Embeddedness

We find some evidence consistent with:

- **Deterrence:**

Initial surveillance is higher, but not within prefects.

Deterrence

and strong evidence for:

- **Signalling:**

Non-partisans put in more effort to reveal their loyalty.

- Non-partisans go after the usual suspects (empirical implication from Luo and Zakharov 2025).

Suspects

# Mechanisms

## Conclusion

# Contribution

1. No models directly focused on effort and political credentials:

→ *trust v. motivation* trade-off

# Contribution

1. No models directly focused on effort and political credentials:  
→ *trust v. motivation trade-off*
2. Lack of evidence on high-level bureaucrats outside of China and the US (Brierley et al. 2023):  
→ *highest decentralized level, very different context + original dataset*

# Contribution

1. No models directly focused on effort and political credentials:

→ *trust v. motivation trade-off*

2. Lack of evidence on high-level bureaucrats outside of China and the US (Brierley et al. 2023):

→ *highest decentralized level, very different context + original dataset*

3. Surveillance literature focused on:

- digital technologies (King, Pan, and Roberts 2013; Xu 2021; Beraja et al. 2023)
- and on the watched (Dipoppa and Pezone 2025; Hager and Krakowski 2022)

→ *focus on offline surveillance and on the watchers*

# Contribution

1. No models directly focused on effort and political credentials:

→ *trust v. motivation trade-off*

2. Lack of evidence on high-level bureaucrats outside of China and the US (Brierley et al. 2023):

→ *highest decentralized level, very different context + original dataset*

3. Surveillance literature focused on:

- digital technologies (King, Pan, and Roberts 2013; Xu 2021; Beraja et al. 2023)
- and on the watched (Dipoppa and Pezone 2025; Hager and Krakowski 2022)

→ *focus on offline surveillance and on the watchers*

**Takeaway:** signalling alignment is a major determinant of bureaucratic behaviour.

## Implication II - Returns to effort: Specification

We fit a simple interacted model:

$$\begin{aligned} \text{Retain Office}_{i,p,m} = & \beta_1 \text{Records}_{i,p,m} + \beta_2 \text{Early Partisan}_{i,p,m} \\ & + \beta_3 \text{Records}_{i,p,m} \times \text{Early Partisan}_{i,p,m} + \phi_p + \gamma_m + \varepsilon_{i,p,m} \end{aligned}$$

- Prefect  $i$  in province  $p$  at mandate  $m$
- $\phi_p$  Province and  $\gamma_m$  Mandate number FE
- OLS and LOGIT

If *Signalling* is true, we expect:

- $\beta_1 > 0$ : surveillance makes it more likely to be reappointed,
- $\beta_3 > 0$ : and more so for early partisans.

→ credentials and performance are complements (à la Jia, Kudamatsu, and Seim 2015).

## Mechanism: Preferential deployment

- Fascist prefects might be more “upwardly embedded” (Toral, 2024)
- and sent to easier locations,
- but we cannot measure waning opposition.

We assume prefects prefer to be deployed in provinces which are:

- closer to home
  - we calculate distance from birthplace,
- more prestigious
  - we calculate the likelihood prefects in the province became MPs (in the Liberal Era).

# Mechanism: Preferential deployment

Table 6: Loyalists Are Not Deployed to Better Places

## Mechanism: Deterrence

*That streets are peaceful does not mean there is no violence.*

(in Przeworski, 2015, p. 249)

- If early partisans had a harsh reputation,
- the opposition might go underground once they are appointed,

→ prefects might surveil less because insurgent activity is reduced.

If this is the case, they might have built that reputation by **opening more records initially** and much less later.

## Mechanism: Deterrence

Figure 12: Early Partisans Building a Harsh Reputation?

# Mechanism: Deterrence

Table 7: Early Surveillance Does Not Seem to Build Deterrence

| Dependent Variable:<br>Model:       | Number of Records Opened |                     |                      |                     |                      |                     |                      |                     |

## Mechanism: Embeddedness

- More local prefects might surveil more efficiently (Scott, 1998; Mattingly, 2019)
- Yet fascist prefects are not deployed closer to home,
- and embeddedness is not associated with less surveillance

# Mechanism: Embeddedness

Table 8: More Local Prefects Do Not Surveil Less

| Dependent Variable:<br>Model:        | (1)               | (2)               | Records Opened    |                   | (5)               | (6)               |

## Mechanism: Testable Implications of Signaling

- Luo and Zakharov (2025) predict efficiency-signaling through the targeting of most likely (ethnic) opponents,
- because ethnicity is observable by the dictator.

## Mechanism: Testable Implications of Signaling

- Luo and Zakharov (2025) predict efficiency-signaling through the targeting of most likely (ethnic) opponents,
- because ethnicity is observable by the dictator.
- As ethnicity is not relevant in our context, we classify most likely opponents as working-class individuals (low-skilled jobs + unemployed)
- and check mediation:

Table 9: Early Partisans effect is entirely mediated by low-skill targets.

| Effect          | Estimate | 95% CI           |
|-----------------|----------|------------------|
| ACME (indirect) | -7.24    | [-11.26 ; -3.73] |
| ADE (direct)    | 0.27     | [ -1.14 ; 1.76]  |
| Total effect    | -6.97    | [-10.85 ; -3.56] |

Notes: Two-equation OLS with province and year fixed effects. ACME = average causal mediation effect; ADE = average direct effect.

- might also be the easiest opponents to *'invent'*
